

Daily Community Clusters

Report Data as of 2/16/2022

- Note on multi-county clusters: Clusters that appear across multiple counties are now reported together as the same cluster if they originated at the same source. Each county where that cluster appears, as well as its associated case/contact counts, are listed as separate rows within the cluster on the detailed cluster report. These multi-county clusters are only counted once in the overall cluster counts on the summary report page.

- A cluster is defined as 2 or more non-household laboratory-confirmed cases of SARS-CoV-2 infection among individuals with an epidemiological link (i.e., event, extended family, workplace, childcare, school, university, sports team/event, etc.).

- This dashboard is not comprehensive of all clusters, as reporting clusters into CommCare varies by county and region.

Total Clusters (Cumulative)	Daily Community Cluster Summary by Industry							Daily Community Cluster Summary by Region						
4,829	Cluster Setting	Clusters	1 Day	1 Week	4 Weeks	Associated Cases	(vs. prior day)	Region	Clusters	1 Day	1 Week	4 Weeks	Associated Cases	(vs. prior day)
